

WHAT IS BRT?

Bioregulation Therapy

A powerful and proven energy-based approach to health and wellness that stimulates the body at the cellular level – helping to accelerate healing and restore natural balance

The importance of cellular communication and regulation

Cellular communication and signaling is critical to maintaining overall health, slowing the aging process and dealing with the symptoms and effects of cell deterioration and disease. Bioregulation Therapy (BRT) uses advanced technology, together with innate biological communication processes, to stimulate cells and expedite the natural healing process. BRT can be used to help a variety of imbalances and conditions, as well as preventively to maintain overall wellness.

How BRT works

Every organ in the body has its own bioelectromagnetic field, and all 70 billion cells in the body communicate via electromagnetic signals, or fields, at the rate 500 trillion chemical reactions per second. In order to maintain balance and sustain good health, all of the body's organs, tissues and subsystems require extremely precise communications to effectively process these instantaneous exchanges. When these critical communications exchanges are interrupted, the body's cells, tissues and organs are compromised and unhealthy symptoms follow.

A number of internal and environmental sources contribute to the breakdown of the body's inner communication processes, including nutritional deficiencies, emotional stressors, microbes, chemicals and electrosmog – high-power electrical lines, microwaves, computers, cell phones and other common electronic devices that emit harmful electromagnetic fields.

During BRT sessions, BRT devices safely deliver extremely low intensity signals at the cellular level in order to create gentle electromagnetic field changes that induce the body's own self-regulation process. It is this natural self-healing activity that deals with difficulties or problems affecting cells, tissues and organs.

More specifically, BRT signals are sent to targeted communication channels in the body. As these signals pass through and "speak" to the cells, they trigger the body to restore communications in those specific channels. Once the communications paths are cleared, the body can efficiently process the electrical and chemical exchanges associated with those channels, address imbalances and dysfunctions in those areas and return the body to a natural state of wellness.

LENYOSYS™

in tune with nature™

Innovative and industry-leading technology

LENYO BRT devices are unique in the industry in that they all feature an advanced signaling technology that enables extreme precision when targeting cells in the body. Rather than generic, broad-range, high-intensity signals that are not able to effectively target the communication channels associated with the areas of the body that need repair, LENYO products combine frequency, intensity, signal modulation and customized program design to stimulate the specific channels needed to best support the natural electromagnetic activities of the targeted tissues or organs.

A comprehensive range of diverse applications

Beneficial for a wide variety of applications, LENYO advanced BRT devices work together with the body's own inner communication processes to address a variety of needs and purposes. Specific application areas include:

- Health and wellness – anti-aging • allergies • bone fractures • contagious diseases and infections • detoxification • diabetes • digestion • eyesight and hearing • fatigue • infertility • inflammation • oncology • pain • shingles • wound healing
- Sports – high-performance athletes • general sports activities
- Workplace – digestion and circulation • concentration and productivity • stress • fatigue • electrosmog • ergonomic problems
- Academic institutions – digestion and circulation • concentration and learning processes • memory • hearing • visual perception

From small pocket-size devices to professional, centrally-managed therapy systems, LENYO BRT devices are ideal for professional practitioners, large health and wellness facilities, spas and sports centers, rehab and physical therapy facilities, offices, schools and the general public. They are easy to operate and safe for adults, seniors and children.

Proven and recognized around the world

LENYO BRT devices utilize Pulsed Electromagnetic Field (PEMF) technology to deliver electromagnetic signals. Electromagnetic field therapy has been studied and practiced for decades, and in Europe alone, there are over three million sessions practiced each day. In the United States, it has been available for over 30 years, and is approved by the FDA to fuse bones, and cleared to address a number of indications – from pain management to mental problems.

Worldwide	<ul style="list-style-type: none">• ISO-13485 certification• Designed and manufactured in the European Union since 1993• Meets the Quality Assurance System set forth by the European Certification Society for Medical Equipment
US	<ul style="list-style-type: none">• FDA registration• E24122 –HCC Biofeedback -Class II Medical Therapy Device (LCC)• D174875-ISA- Therapy - Class I Medical Devices (all other devices)
Europe	<ul style="list-style-type: none">• CE certified• Approved as a Medical Class IIa and Safety Class II.BF (all devices)

ABOUT LENYOSYS. A leader in bioregulation technology and devices, Lenyosys, a division of Nestatek Inc., headquartered in Fort Lauderdale, FL., provides advanced BRT devices and solutions to professional practitioners in the medical, wellness, sports, enterprise, educational and veterinarian fields, as well as home-use products to the general public. Based on state-of-the-art signaling technology, the LENYO line of BRT products include office, in-home and mobile devices. For more information, visit www.lenyosys.com.

LENYO BRT devices have not been evaluated by The Food and Drug Administration (FDA). They are not meant to diagnose, treat, cure or prevent any disease. They do provide general benefits recognized for biofeedback and pulsed electromagnetic field therapy devices such as: normalizing circulation, promoting relaxation, reducing inflammation, enabling the normalization of cell membrane potential, etc. Individuals suffering from any disease or illness should consult with a physician or healthcare professional before using any BRT device.
