BULGARIAN LOCALIZATION PACKAGE

Localizing your SAP Business One

The Bulgarian Localization Package was developed for those companies looking to accelerate profitable growth on the Bulgarian market using SAP Business One. The software includes all the processes you need to run your entire business. It provides extended capabilities to SAP Business OneTM. Although it's a different system it is fully integrated with SAP Business One into one single application, but with multiple functions. It provides complete business management functions covering financials, banking, inventory, operations. The Package consists of logic added into the standard SAP Business One, like an add-on and reporting on either Crystal Reports or Print Layout Designer.

It can be installed quickly and is straight forward to maintain and use. Bulgarian Localization Package can be installed on more than one SAP Business One localization, but the most frequently used and close to the Bulgarian needs are French ad UK. Just like SAP Business One the package can be leverage and customise to meet specific business and industry needs and requirements to future legislative modifications. It is an affordable application for managing your entire business with greater clarity.

It helps manage your general ledger, journals, budgets and accounts payable and receivables. It provides powerful integrated analytical reports to help you access the critical business information you need across financials. You can create and manage your own local chart of account, which can be updated to fit your unique business needs. It completes the tax engine in SAP Business One by addressing a variety of complex tax requirements with user friendly interface that can be easily maintained by company's tax professional. For the statutory reports it integrated with NAP's (National Revenue Agency) electronic services in order to declare the monthly statements.

The Bulgarian Localization Package offers a simple way to fit SAP Business One according to all the statutory and regulatory requirements in Bulgaria.

Designed specifically for SAP Business One, it helps you configure all your needed reporting, flows and declarations according to the Bulgarian legislation.

Local Customers

The packages was successfully implemented and integrated on the Romanian market for various industries.

- Constructions BAUER Bulgaria
- Accountancy and Audit
 BAKER TILLY KLIDOU Bulgaria

Key Functionalities

The Local Bulgarian Chart of Accounts along with the customer specific accounts is uploaded into a standard localization of SAP Business One. GL Determination and other account settings are made based on the uploaded Chart of Accounts.

Print Layouts or Crystal Reports were created in order to cater for the printing of marketing documents (specific format, information or language), like: AR Invoice, Goods Issue etc.

Print Layout Designer, SQL Reporting Services or Crystal Reports were created to provide the necessary reporting Bulgarian statutory formats.

Functionality was developed in order to fulfil the need of inventory objects (small value fixed assets)

A VAT report for creating sales ledger, purchase ledger and declaration is required according to current legislation, in which all documents posting VAT have to be included (invoices, credit memos, reversals, ...). The add-on generates the three necessary files (PRODAGBI.TXT, POKUPKI.TXT, DEKLAR.TXT), which are each month uploaded to the NAP website. A customization table is necessary to define which document type and VAT code belongs to which ledger and column.

Accounting and Financials

- Local Bulgarian Chart of Accounts
