

Visio 85, design and operation

Glass is associated with clarity, purity, transparency and reflection. More and more architects and end-users are valuing the properties of glass and applying them in their interior designs. With the Visio 85 mobile glass wall, Espero has adapted to this and adds a further property: sound insulation! The Visio 85 achieves a Rw-value of 40dB (laboratory value) and is thus the first fully glazed mobile wall which can also be adapted to divide an office. The panels are constructed from a 90 mm slender, self-supporting aluminium frame on which 6 mm thick hardened clear glass is mounted on both sides. It is simple, quick and comfortable to operate with the help of the trusted Espero Quick system. The vertical profiles are fitted with rubber sealing profiles, which, in combination with the seals on the bottom and top, ensure a good closure.

The panels are moved via the overhead aluminium track system. In combination with the trolley wheels, a noiseless and flexible movement is guaranteed, while the layout of the track system can be adapted entirely to your wishes.

Appearance and finishes

Each element has a 90 mm printed frame around which can be supplied in every RAL colour. The glass inside the border is completely clear giving ultimate transparency. It is of course possible to individualise the glass and all glass finishes used in interior design can be applied. It is also possible to integrate blinds, so that transparency can be temporarily eliminated.

Education

With the increase in the number of all-inclusive schools (multifunctional centres), the demand for interiors to be flexibly divided is constantly on the increase. Espero is very happy to work with you in order to arrive at a solution which fits into your interior design plans. Here too, the Espero Visio 85 offers a transparent and safe solution.

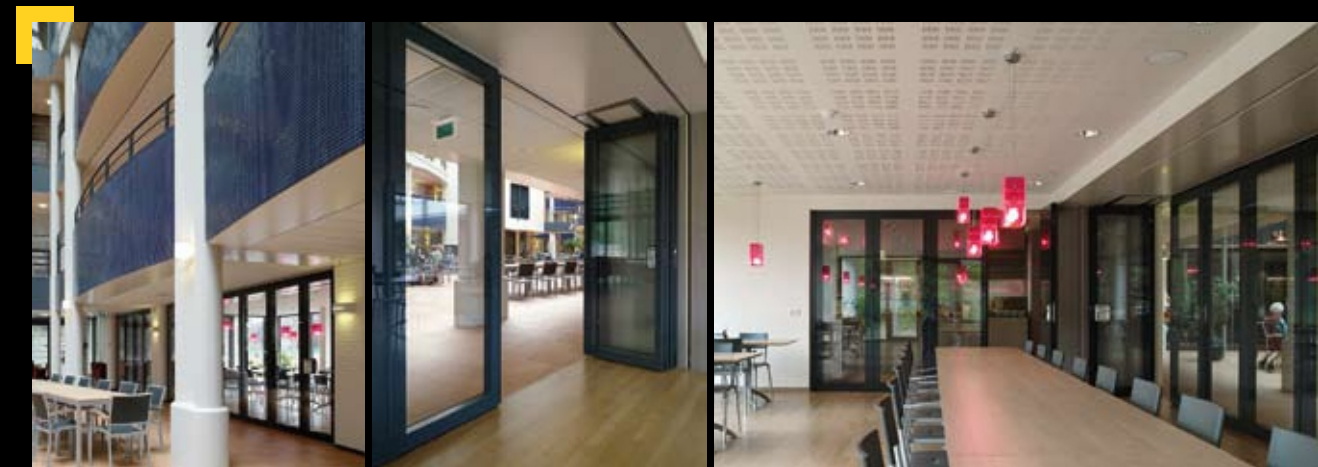

Unlimited flexibility

The Visio 85 offers the possibility of partitioning rooms without compromising the spatial effect envisaged by the architect. Through the high degree of transparency, the overall view is of course retained yet at the same time there is division, resulting in the available square metres being usable in an optimum and flexible way.

ESPERO

Utility

Conference rooms, too, can be flexibly divided by the Visio 85, with corners and angled joints also among the possibilities. Through the use of inbuilt door components, the rooms are separately accessible. Add to this the possibility of combining different types of glass (in these photos clear and frosted) or solid Sonico 85 panels a wide range of variations is available for use with the Visio 85 mobile glass walls.

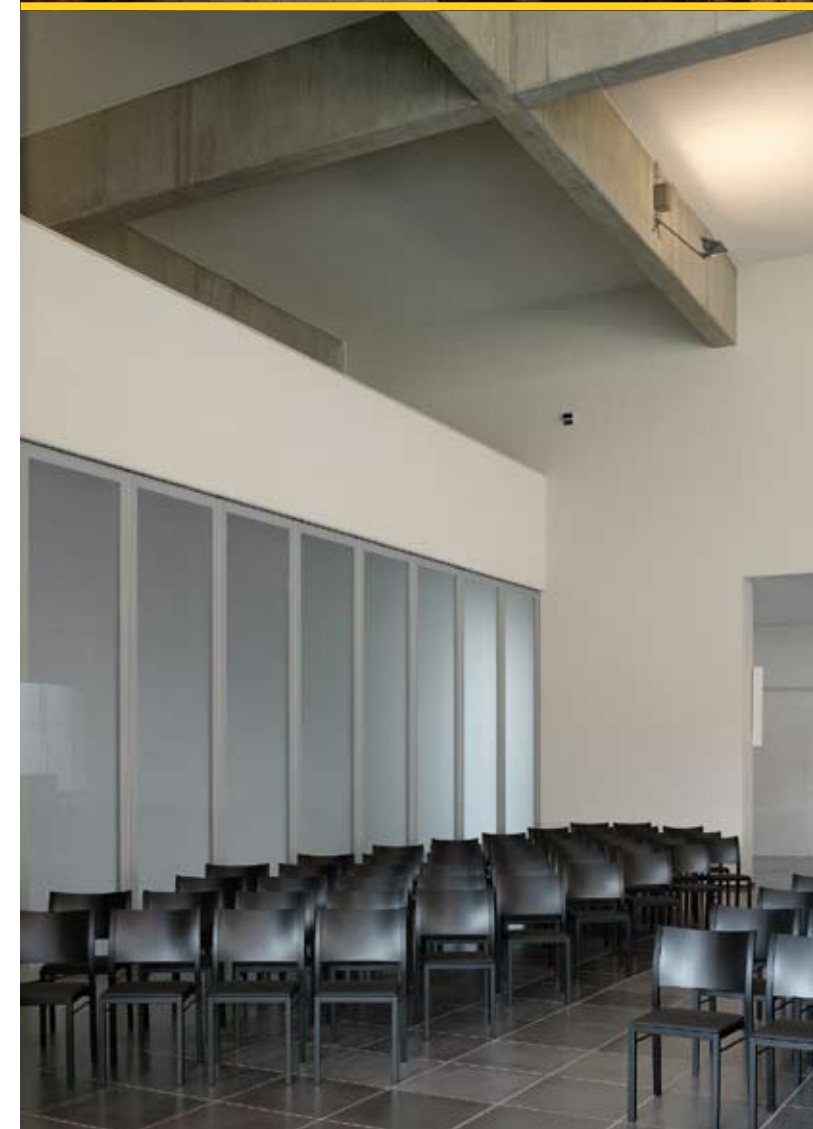

Design

With the reconstruction of this church in Waarschoot (B) which was largely destroyed by fire, the architect has deliberately chosen a glass mobile wall to divide two rooms. The sober choice of colour of the profiles and the use of frosted glass contribute towards the serene atmosphere of the interior, with changing (day) light conditions nevertheless remaining visible in both rooms. This is a beautiful example of unity in form and function being achieved by using the Visio 85.

In addition to Visio mobile glass walls, Espero also supplies

- Sonico mobile partitions
- Visio mobile glass walls
- Flexio flat folding partitions
- Uno & Duplo folding partitions

For a brochure, technical information, drawings or reference addresses, contact Espero or visit our website: www.espero.eu

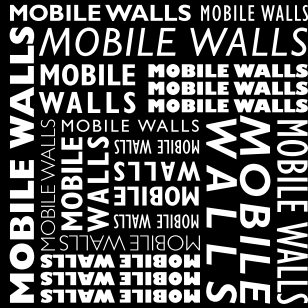

Integration or prominence

Through the use of colour, full integration or simply heavy emphasis in your interior can be achieved with the Visio85. The possible treatments of the glass can also determine the ultimate effect of the use of the Visio 85. If desired, special uses of Visio 85 panels are also possible. Espero's philosophy is to be flexible in every sense.

We are happy to work with you to achieve the result you want.
