The bearings are lubricated by the pumped liquid. In order to avoid problems in connection with disposal, great importance has been attached to using as few different materials as possible. A pump with no maintenance requirements and extremely low life cycle cost.</p> <p>Heating systems</p> <ul style="list-style-type: none"> <li>• Main pump</li> <li>• mixing loops</li> <li>• heating surfaces</li> <li>• air-conditioning surfaces.</li> </ul> <p>The MAGNA1 circulator pumps are designed for circulating liquids in heating systems with variable flows where it is desirable to optimise the setting of the pump duty point, thus reducing energy costs. The pumps are also suitable for domestic hot-water systems.</p> <p>To ensure correct operation, it is important that the sizing range of the system falls within the duty range of the pump.</p> <p>Benefits</p> <ul style="list-style-type: none"> <li>• Safe selection.</li> <li>• Simple installation.</li> <li>• Low energy consumption.
