

# LC83026E

## Digital Signal Processor for Karaoke Systems

### Overview

The LC83026E provides the audio signal processing required in karaoke systems, including pitch shift, microphone echo, voice muting, and simple surround simulation. It is a special-purpose DSP that implements karaoke processing with the addition of a single external 256-Kb DRAM. The LC83026E includes on-chip A/D and D/A converters and supports both digital and analog inputs and outputs. Its functions and characteristics can be modified to match the needs of the end product by sending coefficient data from the microcontroller over a serial interface.

### Features

- Application features

- Pitch shift

The LC83026E supports pitch shifting of  $\pm 15$  quarter tone steps, or  $\pm 1$  octave in scale tone units as specified by command data. This pitch shifting can be applied either to the music track or to the microphone input. It is also possible to set up pitch shifting of  $\pm 1$  octave in arbitrary steps by setting coefficient values.

- Microphone echo

The LC83026E can apply echo processing to the input signal from the microphone A/D converter. The echo coefficients, including amount of echo and delay time, can be set.

- Voice muting

The LC83026E provides attenuation of monaural components in the music signal. This allows CDs that include vocals to be used for karaoke. The voice muting function is turned on or off by command data transferred over the serial interface.

- Simple surround

The LC83026E implements a simple surround simulation function by adding delay components to the music signal. The LC83026E includes six sets of simple surround coefficients as preset data, and these can be selected and switched using command data transferred over the serial interface. User-original surround effects can be implemented by setting

coefficients, but the algorithm is fixed.

- Versatile input mixing

The LC83026E supports hybrid mixing of digital music inputs and analog music inputs for both the left and right channels to support the processing of a wide range of disks.

- Audio inputs and outputs

- Inputs: Digital A/D converters

One system (stereo)
Three channels

- Outputs: Digital D/A converters

One system (stereo)
Two channels

- A/D converters

Second-order delta-sigma modulation
Three channels

- D/A converters

2 $\times$ oversampling digital filters + third-order noise shaper system	Two channels
---	--------------

- Master clock: 768fs

- External memory: Up to two 256K (64K  $\times$  4 bits) external DRAMs can be used.

- Microcontroller input: Synchronous 8-bit serial data

- Power-supply voltage: 5V single-voltage supply

- Package: QFP80E

### Pin Functions

	Pin	Pin No.	I/O	Function
Control pins	OSC1	19	I	Crystal oscillator connection (768fs)
	OSC2	20	O	Crystal oscillator connection (768fs)
	FS384I	22	I	384fs input
	$\overline{\text{SELC}}$	8	I	Audio clock source switching (High: external, low: internal)
	SAIF	10	I	Digital audio input mode switching (Low: backward packing, high: forward packing)
	SAOF	11	I	Digital audio output mode switching (Low: 48fs, high 64fs)
	$\overline{\text{RES}}$	9	I	Reset
	TEST5 to 1	16 to 12	I	Test (Must be connected to ground during normal operation.)
	P0	49	I	Coefficient transfer mode control
	P2 to P1	51, 50	I	Initial operating mode control (A high level should be applied for normal operation.)
P3	52	O	Microphone signal input level: Yes (low output)/No (high output) output	
P4	53	O	Music signal input level: Yes (low output)/No (high output) output	
External memory interface	$\overline{\text{RAS}}$	78	O	$\overline{\text{RAS}}$ signal output
	$\overline{\text{CAS}}$	79	O	$\overline{\text{CAS}}$ signal output
	$\overline{\text{DREAD}}$	80	O	External memory read signal output
	$\overline{\text{DWRIT}}$	1	O	External memory write signal output
	A8 to A0	67 to 59	O	Address output
	D7 to D0	68 to 71, 74 to 77	I/O	Data input and output (Normally only D0 to D3 are used)
Audio interface	LRCKI	23	I	ASI L/R clock input (1fs)
	LRCKO	4	O	ASO L/R clock output (1fs)
	BCKI	7	I	ASI bit clock input (32fs or higher)
	BCKO	3	O	ASO bit clock output (48fs or 64fs)
	FS384O	5	O	ASO 384fs output
	ASI	6	I	Digital audio data input (16-bits, MSB first)
	ASO	2	O	Digital audio data output (16-bits, MSB first, backward packed)
	ADL1	34	I	A/D converter input (left channel)
	ADL2	32	O	A/D converter output (left channel)
	ADL3	36	O	A/D converter output (left channel)
	ADR1	40	I	A/D converter input (right channel)
	ADR2	38	O	A/D converter output (right channel)
	ADR3	42	O	A/D converter output (right channel)
	ADM1	45	I	A/D converter input (microphone)
	ADM2	43	O	A/D converter output (microphone)
	ADM3	47	O	A/D converter output (microphone)
DALP	25	O	D/A converter output (left channel)	
DALN	26	O	D/A converter output (left channel)	
DARP	30	O	D/A converter output (right channel)	
DARN	29	O	D/A converter output (right channel)	
Microcontroller interface	$\overline{\text{SIRQ}}$	54	I	Input for the serial input request signal
	$\overline{\text{SIACK}}$	58	O	Output that indicates that a serial input is in progress
	SI	55	I	Serial data input from the control microcontroller (8-bit serial input)
	SICK	56	I	SI pin transfer clock input
	$\overline{\text{SRDY}}$	57	I	Ready signal input (from the control microcontroller) that indicates the completion of a serial data input.

## LC83026E

Continued from preceding page.

Pin	Pin No.	I/O	Function
Power supply	DV <sub>DD1</sub> to 3	17, 18, 72	— Digital block V <sub>DD</sub> (Must be connected to +5 V.) <Make connections as short as possible so that no potential differences occur between any of the V <sub>DD</sub> pins.>
	DV <sub>SS1</sub> to 3	21, 48, 73	— Digital block V <sub>SS</sub> (Must be connected to ground.) <Make connections as short as possible so that no potential differences occur between any of the V <sub>SS</sub> pins.>
	ADLV <sub>DD</sub>	35	— A/D converter V <sub>DD</sub> (left channel) (Connect to +5 V.)
	ADRV <sub>DD</sub>	41	— A/D converter V <sub>DD</sub> (right channel) (Connect to +5 V.)
	ADMV <sub>DD</sub>	46	— A/D converter V <sub>DD</sub> (microphone) (Connect to +5 V.)
	DALV <sub>DD</sub>	24	— D/A converter V <sub>DD</sub> (left channel) (Connect to +5 V.)
	DARV <sub>DD</sub>	31	— D/A converter V <sub>DD</sub> (right channel) (Connect to +5 V.)
	ADLV <sub>SS</sub>	33	— A/D converter V <sub>SS</sub> (left channel) (Connect to ground.)
	ADRV <sub>SS</sub>	39	— A/D converter V <sub>SS</sub> (right channel) (Connect to ground.)
	ADMV <sub>SS</sub>	44	— A/D converter V <sub>SS</sub> (microphone) (Connect to ground.)
	DALV <sub>SS</sub>	27	— D/A converter V <sub>SS</sub> (left channel) (Connect to ground.)
	DARV <sub>SS</sub>	28	— D/A converter V <sub>SS</sub> (right channel) (Connect to ground.)

Design the wiring so that potential differences do not occur between the analog system V<sub>DD</sub> pins and either other analog system V<sub>DD</sub> pins or the digital system V<sub>DD</sub> pins.

Design the wiring so that potential differences do not occur between the analog system V<sub>SS</sub> pins and either other analog system V<sub>SS</sub> pins or the digital system V<sub>SS</sub> pins.

### Pin Circuits

Pins	Specifications	Circuit
ASO, LRCKO, BCKO, $\overline{\text{RAS}}$ , $\overline{\text{CAS}}$ , DREAD, DWRT, FS384O, A0 to A8	TTL output	 Output data A07312
P3, P4, SIAK	CMOS intermediate current output	 Output data A07313
ADL2, ADL3, ADM2, ADM3, ADR2, ADR3	Analog output	 Output data A07314
DALP, DALN, DARP, DARN		 Output data A07315
SI, SICK, $\overline{\text{SIRQ}}$ , $\overline{\text{SRDY}}$ , (OSC1)	Schmitt input	 Input data A07316
FS384I, BCKI, ASI, LRCKI	Low Schmitt input	 Input data A07317
TEST1 to TEST5	Normal input	 Input data A07318
$\overline{\text{RES}}$	Input with built-in pull-up resistor	 Input data A07317
$\overline{\text{SELC}}$ , SAIF, SAOF	Input with built-in pull-down resistor	 Input data A07318

## Specifications

**Absolute Maximum Ratings at  $T_a = 25^\circ\text{C}$ ,  $V_{SS} = 0\text{ V}$**

Parameter	Symbol	Conditions	Ratings	Unit	Notes
Maximum supply voltage	$V_{DD\text{ max}}$		-0.3 to +7.0	V	
Input voltage	$V_{IN}$		-0.3 to $V_{DD} + 0.3$	V	
Output voltage	$V_{O1}$	OSC2 output	Values up to the oscillator voltage are allowable.	V	
	$V_{O2}$	Outputs other than OSC2	-0.3 to $V_{DD} + 0.3$	V	
Peak output current	$I_{OP1}$	Audio interface, external RAM interface	-2 to +4	mA	1
	$I_{OP2}$	Microcontroller interface, P3, P4	-2 to +10	mA	2
Average output current	$I_{OA1}$	Audio interface, external RAM interface: Per pin	-2 to +4	mA	1
	$I_{OA2}$	Microcontroller interface, P3, P4: Per pin	-2 to +10	mA	2
	$\Sigma I_{OA1}$	FS384O, LRCKO, BCKO, ASO : Total	-10 to +10	mA	
	$\Sigma I_{OA2}$	DWRT, DREAD, RAS, CAS, A0 to A8, D0 to D7, SIAK, P3, P4 : Total	-10 to +10	mA	
Allowable power dissipation	$P_d\text{ max}$	$T_a = -30\text{ to }+70^\circ\text{C}$	700	mW	
Operating temperature	$T_{opr}$		-30 to +70	$^\circ\text{C}$	
Storage temperature	$T_{stg}$		-40 to +125	$^\circ\text{C}$	

**Allowable Operating Ranges at  $T_a = -30\text{ to }+70^\circ\text{C}$ , all  $V_{DD} = 4.75\text{ to }5.25\text{ V}$ , all  $V_{SS} = 0\text{ V}$  unless otherwise specified**

Parameter	Symbol	Conditions	Ratings			Unit	Notes
			min	typ	max		
Operating supply voltage	$V_{DD}$		4.75		5.25	V	
Input high-level voltage	$V_{IH1}$	Audio interface and external RAM interface	2.4			V	4
	$V_{IH2}$	P0 to P2, SELC, SAIF, SAOF, TEST1 to TEST5	$0.7 V_{DD}$			V	5
	$V_{IH3}$	RES, OSC1, and the microcontroller interface	$0.75 V_{DD}$			V	6
Input low-level voltage	$V_{IL1}$	Audio interface and external RAM interface			0.8	V	4
	$V_{IL2}$	P0 to P2, SELC, SAIF, SAOF, TEST1 to TEST5			$0.3 V_{DD}$	V	5
	$V_{IL3}$	RES, OSC1, and the microcontroller interface			$0.25 V_{DD}$	V	6
Instruction cycle time	$t_{CYC}$		58		59.11	ns

### Differences between the LC83025E and the LC83026E

Parameter	LC83025E	LC83026E
A/D converter block	Decimation filter improved	
	Input comparator improved	
	*: The $V_{REF}$ pin was added in association with the improvements to the input comparator. The $V_{REF}$ pin external capacitor must be located as close as possible to the LC83026E, and must be connected with lines that are as short as possible.	
D/A converter block	4 × oversampling filters used	2 × oversampling filters used
	Second-order noise shaping	Third-order noise shaping
Reset time	Single-pin output used.	Two-pin output operation
Reset time	One or more sampling period	Two or more sampling periods
When no digital input is provided (when the SELC pin is low)	The LRCKI and BCKI pins must be connected to the LRCKO and BCKO pins.	The LRCKI and BCKI pins must be connected to either $V_{DD}$ or $V_{SS}$ ; they do not need to be connected to the LRCKO and BCKO pins.

\*: The VREF pin capacitor must be located as close as possible to the IC.  
 Note: All external circuits should be located as close as possible to the IC.
