

# DUNNAGE BAGS

## Dunnage Bags:

- inflatable bags for use in securing & stabilizing cargo transported by land, rail and sea.
- available in a variety of sizes and various pressure ratings (Levels) in order to correctly protect loads under different conditions.
- outstanding load stabilizing capacity and resistance to load shifting.

## Usage Benefits:

- Lightweight and Waterproof
- Easy to use
- Fast set-up
- Cost effective and Reusable
- Take shape to odd configurations
- Environmentally friendly
- Can fill larger voids

Airbags are placed in the space between cargo units such as pallets, cases, crates, barrels and coils, and then inflated to pressures from 2 to 10 PSI depending on the particular type and application. Configuration can be done in a matter of minutes, with minimum physical efforts and just by use of an inflator gun.

 Without

 With

- Turning corners, emergency swerving
- Heavy breaking / skidding / stop & start acceleration
- Uneven surfaces
