

Resistance thermometer Model TR10-B, for additional thermowell

WIKA data sheet TE 60.02

for further approvals
see page 2

Applications

- Machine building, plant and vessel construction
- Energy and power plant technology
- Chemical industry
- Food and beverage industry
- Sanitary, heating and air-conditioning technology

Special features

- Application ranges from -200 ... +600 °C
(-328 ... +1,112 °F)
- For mounting in all standard thermowell designs
- Spring-loaded measuring insert (replaceable)
- Pt100 or Pt1000 sensors
- Explosion-protected versions

Description

Resistance thermometers in this series can be combined with a large number of thermowell designs. Operation without thermowell is only recommended in certain applications.

A wide variety of possible combinations of Pt100 or Pt1000 sensor, connection head, insertion length, neck length, connection to thermowell etc. are available for the thermometers; suitable for any thermowell dimension and any application.

Optionally we can fit analogue or digital transmitters from the WIKA range into the connection head of the TR10-B.

Fig. left: connection head, model BSZ
Fig. right: connection head, model 1/4000

Explosion protection (option)

The classification/suitability of the instrument (permissible power P_{max} as well as the permissible ambient temperature) for the respective category can be seen on the EC-type examination certificate, the Ex certificate or in the operating instructions.

Attention:

Only with the corresponding suitable protective fitting is operation in dust Ex hazardous areas permissible.

Built-in transmitters have their own EC-type examination certificate. The permissible ambient temperature ranges of the built-in transmitters can be taken from the corresponding transmitter approval.

Approvals (explosion protection, further approvals)

Manufacturer's information and certifications

Logo	Description
	SIL 2 Functional safety (only in conjunction with model T32 temperature transmitter)
	NAMUR NE24 Hazardous areas (Ex i)

1) Only for built-in transmitter

2) Only with model BSZ or BSZ-H connection head (see "Connection heads")

3) Suitable cable gland required

Instruments marked with "ia" may also be used in areas only requiring instruments marked with "ib" or "ic".

If an instrument with "ia" marking has been used in an area with requirements in accordance with "ib" or "ic", it can no longer be operated in areas with requirements in accordance with "ia" afterwards.

For deliveries to CIS countries and Ukraine, a technical passport is required and generated for each specific order.

Approvals and certificates, see website

Sensor

Measuring element

Pt100, Pt1000 ¹⁾ (measuring current: 0.1 ... 1.0 mA) ²⁾

Connection method	
Single elements	1 x 2-wire 1 x 3-wire 1 x 4-wire
Dual elements	2 x 2-wire 2 x 3-wire 2 x 4-wire ³⁾

Accuracy class / Range of use for the sensor per EN 60751		
Class	Sensor construction	
	Wire-wound	Thin-film
Class B	-200 ... +600 °C	-50 ... +500 °C
	-200 ... +450 °C	-50 ... +250 °C
Class A ⁴⁾	-100 ... +450 °C	-30 ... +300 °C
Class AA ⁴⁾	-50 ... +250 °C	0 ... 150 °C

1) Pt1000 only available as a thin-film measuring resistor

2) For detailed specifications for Pt100 sensors, see Technical information IN 00.17 at www.wika.com.

3) Not with 3 mm diameter

4) Not with 2-wire connection method

Electrical connection

(Colour code per EN/IEC 60751)

3160629_06

For the electrical connections of built-in temperature transmitters see the corresponding data sheets or operating instructions.

Connection head

■ European designs per EN 50446 / DIN 43735

1) Not available for BVS connection head

2) Only for BSZ-H connection head

3) Not available for ½ NPT thread size cable entry

4) With appropriate mating connector connected

5) Suitable cable gland required for operation

Ingress protection

to IP65/IP68 per IEC 60529/EN 60529 under the following conditions:

- Use of a suitable cable gland
- Use of a cable cross-section appropriate for the gland or select the appropriate cable gland for the available cable
- Adhere to the tightening torques for all threaded connections

Transmitter

Mounting onto the measuring insert

With mounting on the measuring insert, the transmitter replaces the terminal block and is fixed directly to the terminal plate of the measuring insert.

Measuring insert with mounted transmitter (here: model T32)

Measuring insert prepared for transmitter mounting

Mounted within the cap of the connection head

Mounting the transmitter in the cap of the connection head is preferable to mounting it on the measuring insert. With this type of mounting, for one, a better thermal insulation is ensured, and in addition, exchange and mounting for servicing is simplified.

○ Mounted instead of terminal block

● Mounted within the cap of the connection head

- Mounting not possible

The mounting of a transmitter on the measuring insert is possible with all the connection heads listed here. The fitting of a transmitter in the (screw) cap of a North American design connection head is not possible.

Mounting of 2 transmitters on request.

For a correct determination of the overall measuring deviation, the sensor and transmitter measuring deviations must be added.

Functional safety (option)
with temperature transmitter model T32

In safety-critical applications, the entire measuring chain must be taken into consideration in terms of the safety parameters. The SIL classification allows the assessment of the risk reduction reached by the safety installations.

TÜV certified SIL version for protection systems developed in accordance with IEC 61508), are suitable as sensors for safety functions to SIL 2.

Selected TR10-B resistance thermometers, in combination with a suitable temperature transmitter (e.g. model T32.1S,

For detailed specifications, see Technical information IN 00.19 at www.wika.com.

Neck lengths

Neck tube design	Neck length	Min. / max. neck length
Neck tube per DIN 43772	150 mm (approx. 6 inch)	25 mm (approx. 1 inch) / 500 mm (approx. 20 inch)
Neck tube per DIN 43772, straight	150 mm (approx. 6 inch)	75 mm (approx. 3 inch) / 900 mm (approx. 35 inch)
Neck tube with counter nut to head	150 mm (approx. 6 inch)	75 mm (approx. 3 inch) / 250 mm (approx. 10 inch)
Double threaded hex bushing (with hexagonal spanner flats)	■ M24 x 1.5 to connection head, parallel thread to thermowell	13 mm
	■ 1/2 NPT to connection head, parallel thread to thermowell	25 mm
	■ M24 x 1.5 to connection head, tapered thread to thermowell	25 mm
	■ 1/2 NPT to connection head, tapered thread to thermowell	25 mm
	■ 1/2 NPT to connection head, tapered thread to thermowell	25 mm
“Nipple-union-nipple” neck tube	150 mm (approx. 6 inch)	75 mm (approx. 3 inch) / 250 mm (approx. 10 inch)
Double threaded hex bushing (tube section)	50 mm (approx. 2 inch)	50 mm (approx. 2 inch) / 250 mm (approx. 10 inch)

The neck tube is screwed into the connection head. The neck length depends on the intended use. Usually an isolation is bridged by the neck tube. Also, in many cases, the neck tube serves as a cooling extension between the connection head and the medium, in order to protect any possible built-in transmitter from high medium temperatures.

Other versions on request

Measuring insert

Within the TR10-B, the measuring insert of model TR10-A is fitted.

The replaceable measuring insert is made of a vibration-resistant, sheathed, mineral-insulated cable (MI cable).

Fig. left: standard version
Fig. right: version with recessed soldering lugs (option)

Dimensions in mm

Measuring insert diameter $\varnothing d$ in mm	Index per DIN 43735	Tolerance in mm	Sheath material		
			Standard design	Recessed soldering lugs	
3 ¹⁾	Standard	30	3 ±0.05	1.4571, 316L ^{1) 2)}	1.4571
6	Standard	60	6 ⁰ _{-0.1}	1.4571, 316L ^{1) 2)}	1.4571
8 (6 mm with sleeve)	Standard	-	8 ⁰ _{-0.1}	1.4571	1.4571
8	Standard	80	8 ⁰ _{-0.1}	1.4571, 316L ^{1) 2)}	1.4571

1) Not possible with 2 x 4-wire versions

2) Not with socket design with recessed soldering lugs

Only correct measuring insert length and correct measuring insert diameter ensure sufficient heat transfer from thermowell to the measuring insert.

The bore diameter of the thermowell should be a max. 1 mm larger than the measuring insert diameter.

Gaps of more than 0.5 mm between thermowell and the measuring insert will have a negative effect on the heat transfer, and they will result in unfavourable response behaviour from the thermometer.

When fitting the measuring insert into a thermowell, it is very important to determine the correct insertion length (= thermowell length for bottom thicknesses of ≤ 5.5 mm). In order to ensure that the measuring insert is firmly pressed down onto the bottom of the thermowell, the insert must be spring-loaded (spring travel: max 10 mm).

Thermowell selection

Special thermowells on request

Operating conditions

Mechanical requirements

Version	
Standard	6 g peak-to-peak, wire-wound or thin film measuring resistor
Option	Vibration-resistant sensor tip, max. 20 g peak-to-peak, thin-film measuring resistor
	Highly vibration-resistant sensor tip, max. 50 g peak-to-peak, thin-film measuring resistor

The information on the vibration resistance refers to the tip of the measuring insert.

Ambient and storage temperature

-40 ... +80 °C

Other ambient and storage temperatures on request

Certificates

Certification type	Measuring accuracy	Material certificate ¹⁾
2.2 test report	x	x
3.1 inspection certificate	x	-
DKD/DAkkS calibration certificate	x	-

The different certifications can be combined with each other.

1) Thermowells have their own material certificates

Ordering information
