

# WOCA Exterior Gel

– for refreshing of previously oil treated wood surfaces outdoor

- Easy to use
- Economic in consumption
- Suitable for children's toys
- Contains UV-protection
- Certified by IBR

## Product info

**Container:** 400 ml

**Consumption:** 6-12 m<sup>2</sup>/l  
depending on the wood type

## Application area

For the treatment of any oiled surface e.g. garden furniture.

## Result

The gel is effective, quick-drying and enhances the natural grain structure of the wood and colour and gives a resistant and strong surface.

## Application

Apply the gel with a pad or cotton cloth on the clean wood. Repeat the treatment, if the wood is not saturated after the first treatment. Remove excess gel with a cotton cloth. Surface may be buffed with a pad.

## After care

In order to obtain a high absorbing surface, it might become necessary to repeat the treatment.

## Maintaining and cleaning

For regular cleaning use Exterior Cleaner. For the maintenance use Exterior Gel if necessary.

# How to do...

– WOCA Exterior Gel  
For refreshing of previously oil treated  
wood surfaces outdoor

Easy and effective. Naturally

## Tools

Cotton cloths and polishing pads.

### **Please notice!**

*Risk of self-ignition! Due to the risk of self-ignition it is important that sanding dust and oil wetted cloths are soaked in water and disposed of in a tightly closed container after use.*

**WOCA Exterior Gel is for refreshing of previously oil treated wood surfaces.** The gel is effective, quick-drying and enhances the natural grain structure of the wood and colour and gives a resistant and strong surface.

- 1** Clean the surface thoroughly with WOCA Exterior Cleaner. See working instructions of the WOCA Exterior Cleaner, and let it dry for at least 8 hours until the surface is completely dry.  
In case of grain rising, we would advise the surface is de-nibed (remove any sanding dust from the surface).
- 2** Spread a suitable layer of gel in an even thin coat with a polishing pad (white, beige or red).
- 3** Continue polishing until the wood appears saturated and the surface looks uniform.  
We recommend working in sections as the gel dries quickly.

- 4** Wipe off any excess gel from the polished surface carefully with a dry lint-free cloth before continuing to next area. The surface should not appear wet and there should not be any excess gel left on the surface after polishing.

In case the wood does not seem completely saturated after 4-6 hours, we recommend re-polishing with a smaller quantity gel than by first treatment, but same procedure.

Leave the wood surface to dry for 4-6 hours, thereafter it may be used cautiously.

If possible, do not expose the surface to water during the first 2-3 days.
