

# Road marking machine «Kontur 90HP»

---

## General information

«Kontur 90HP» is designed for application of horizontal road marking with modern one component cold plastic and the use of reflective glass beads.

## Technological Properties

The machine can apply the following types of lines: solid, structured chaotic and structured drops. The machine is self propelled and is controlled by an operator who walks behind it. Directly during the process of marking application, reflective glass beads are applied on the line with the help of an automatic glass beads gun with an adjustable diffuser.

## Functionality

A marking block is equipped with quick-detachable applicators for structural lines. Rib-line marking is applied with the help of pull-behind trays. Mixing of cold plastic with a hardener is done with the help of a dynamic mixer, and occurs directly before application on a road surface.

## Comfort

Dosing of components is done in automatic mode. Cleaning of a mixer and an applicator is controlled through the operator's panel and requires a minimal attention from staff's side.

## Technical specifications

Line width .....	100 - 240 mm
Maximum road marking speed .....	5 km/h
Dimensions (length x width x height), m .....	1.9 x 1.1 x 1.2
Cold plastic tank .....	150 kg
Glass beads tank .....	18 l
Hardener tank .....	10 l
Solvent tank .....	10 l
