

deco spirits

SPIRIT
New and creative ways to decorate

Very effective with hardly any effort at all: That is the deco spirit. The self-adhesive elements add a trendy designer effect to any room. Easy to affix and to then remove later. A fresh new stylish look to any room in no time.

deco Wildlife and metallic

For trendsetters
Creating that fashionable look using metallic and wildlife films

Using our metallic and wildlife films, you can quickly create a trendy atmosphere, which is great not only for music lovers. Just a few easy steps are needed to give a new look to speakers or shelves and so much more. Your own creative imagination matched up with today's fashion and design trends.

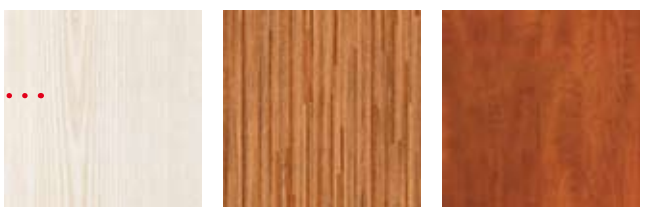

deco Wood finishes and marble

Simply perfect.
The wood and marble films

The recipe for the real „gourmet“: A combination of wood and marble. The effect is amazing: Old worktops, cabinet fronts and even the refrigerator are as good as new. This way the kitchen will become your favourite room without any effort at all – and cooking becomes even more enjoyable.

deco One colour

A boost to your mood
Added highlights with films in solid colour and effects

Get rid of the boring day-to-day – bring on the fun! By using the mirror film or a solid colour film, for example, anyone can re-design boring old furniture and add colour to their home – and even do so quickly.

Effective eye-catcher
Transparent film to protect from view

glass Transparent films

Stylish - trendy
Using transparent film to screen from view and for decorative accents

Peering eyes of nosy neighbours don't stand a chance with our transparent film. No matter whether in colourful prints or transparent embossed – when affixed to a glass or mirror surface they are an effective screen from view and the perfect decorative touch.

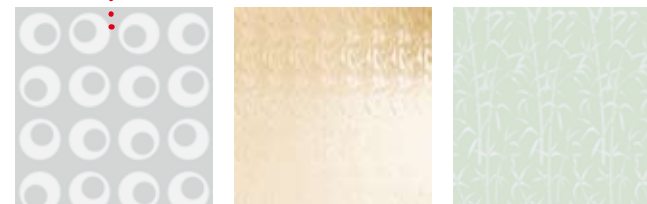

glass Transparent films

Refreshingly different
Transparent film is simply perfect for the bathroom

Today, wellness starts in your own bathroom. With just a few simple resources, you can turn a plain room into a fantastic oasis of wellness. In the end, our transparent films become real eye-catchers. Just a few simple steps by hand and your shower takes on a modern design and what's more, you've added a screen from view free of charge.

glass 1-2-3-static

Preparation: Clean the glass surfaces and cut the film to size.

- 1 Spray some water on the glass surface.
- 2 Pull off the protective film and affix the 1-2-3 static film.
- 3 Spray the film's surface with some water and brush any moisture off using a window wiper or similar tool.

Drawing attention – screening from view
A screen from view that stays in place – no adhesive needed!

The film with unlimited possibilities: No matter whether as a screen from view or for decoration
1-2-3 static can be used over and over again to implement all of your new ideas.

Application instructions

Preparation

What do you need?

A pair of scissors or cutters, a ruler or yard stick, a pen, plastic squeegee blade

Steps

1. Measure and cut to size

With the use of a ruler and a pen, you can draw your desired form on the paper on the back of the film. The grid pattern on the back of the film is very helpful when doing so.

2. Affixing and smoothing out

To start off, only remove approx. 10 cm of the paper on the back of the film, apply it at the edges and then affix them. Then, slowly pull off the rest of the paper on the back and smooth out the film from the inside to the outside so that no bubbles are formed using a plastic squeegee or a clean rag.

Some helpful tips

Air bubbles

You can avoid air bubbles or creases if you slowly pull off the paper on the back bit by bit when affixing the film (in steps of approx. 15-20 cm at a time). In the event that a few small air bubbles do form, you can prick them open with a needle and press out the air.

Edges

When affixing the film to edges, you may find it useful to heat up the film with a hair dryer (at the lowest heat level). Once the film has been heated a bit, it can be drawn across corners and edges effortlessly. Use care in this case to make sure that the film is not overstretched too far.

d-c-fix and the environment

Is the film applied crooked?

No problem – you can carefully pull it back off and re-apply it – the full power of the adhesive does not take effect until several hours later.

d-c-fix and the environment

We place high value in the fact that our self-adhesive films are manufactured, processed and recycled in an environmentally friendly manner. That is the reason why we use solvent-free emulsion adhesives only.

d-c-fix films are free of heavy metals, lightfast in accordance with DIN EN ISO 105-B02 as well as abrasion and rub resistant in accordance with DIN EN ISO 105-X12
