

ECONOMY LF5xx

The standard fire-protection door element with a four-sided thin rebate. For use in low-priority, rarely frequented areas in buildings such as boiler rooms, basement corridors, machine rooms etc. and places that require fire protection by law.

With its innocuous and simple design, ECONOMY is an optically neutral door element with fire-protection that can be easily integrated into less frequented areas in any building concept. ECONOMY can be obtained as single-leaf element and is certified according to the latest EN norms. The

element can be used both left and right and provides an inexpensive solution where fire protection is necessary, thanks to its four-sided thin rebate. As an alternative to the conventional Z-frame, this element is also available with a plug and screw corner-fixed frame and a shell frame

Without floor inset

Installable with or without threshold. Screwed for quick de-installation

Constructional hinge

An approximately +/- 2.5mm adjustable-in-height, ball-bearing hinge ensures smooth functioning.

Spring hinge

Spring hinge for self-closing.

Value for money and solid

Detailed solutions, such as height-adjustable hinges and smart threshold options allow for installation onto a ready-made floor, making ECONOMY an installer-friendly standard door. Who would want to miss these benefits at their warehouse?

Product features
