

CATALOG PLACUTE AMOVIBILE

Va prezentam **cel mai mare catalog de placute amovibile**, realizat de o firma din Romania. Avem mai mult de 500 de modele de placute standard in catalog. Produsele marcate in tabel cu semnul negru sunt in stoc la furnizor, pot fi livrate in maxim 7 zile. Placutele sunt ambalate in cutii de cate 10 bucati.

Merita sa studiat acest catalog, pentru ca sigur veti gasi solutia potrivita nevoilor dumneavoastra!

Alaturi de prezentarea fiecarui tip de placute, am realizat o descriere tehnica a duritatii fiecarei categorii. Alegerea acesteia se face in functie de tipul de material prelucrat. Atentie, cu cat duritatea placutei creste, cu atat scade rezistenta sa la rupere!!!!

Cereti-ne o cotation de pret, fara sa omiteti sa specificati cantitatea dorita, pentru ca aceasta poate influenta semnificativ pretul produselor. Daca nu ati gasit solutia, contactati consultantii nostri si ei va vor ajuta! In definitiv, ideea este cea care da nastere banilor, si nu banii dau nastere unei idei!

In speranta ca v-am fost de folos, va dorim spor la bani si....odihna placuta! Acum nu trebuie sa mai pierdeti timpul cautand si analizand!

Definitie granulatie	Dimensiunea medie a granulelor de carbura
Granulatie Nano	<0.2µm
Granulatie Ultrafina	0.2<0.5µm

K-HC10

Este o categorie noua ideala pentru lemn de esenta moale si lemn esenta tare. Nu este recomandat pentru prelucrare de PAL, MDF, HDF. Aceasta placuta are duritate mai mica decat K-HC05, dar creste cu 30 % rezistenta la rupere. Datorita faptului ca are duritate mai mica decat K-HC05, are cel mai mic pret de vanzare.

K-HC-05

Acesta categorie este cea mai folosita pentru placute amovibile si blancuri pentru profilat. Are rezultate bune pe toata gama de materiale folosite in industria lemnului din zilele noastre si stabileste un standard pentru performanta si pret.

K-KCR08

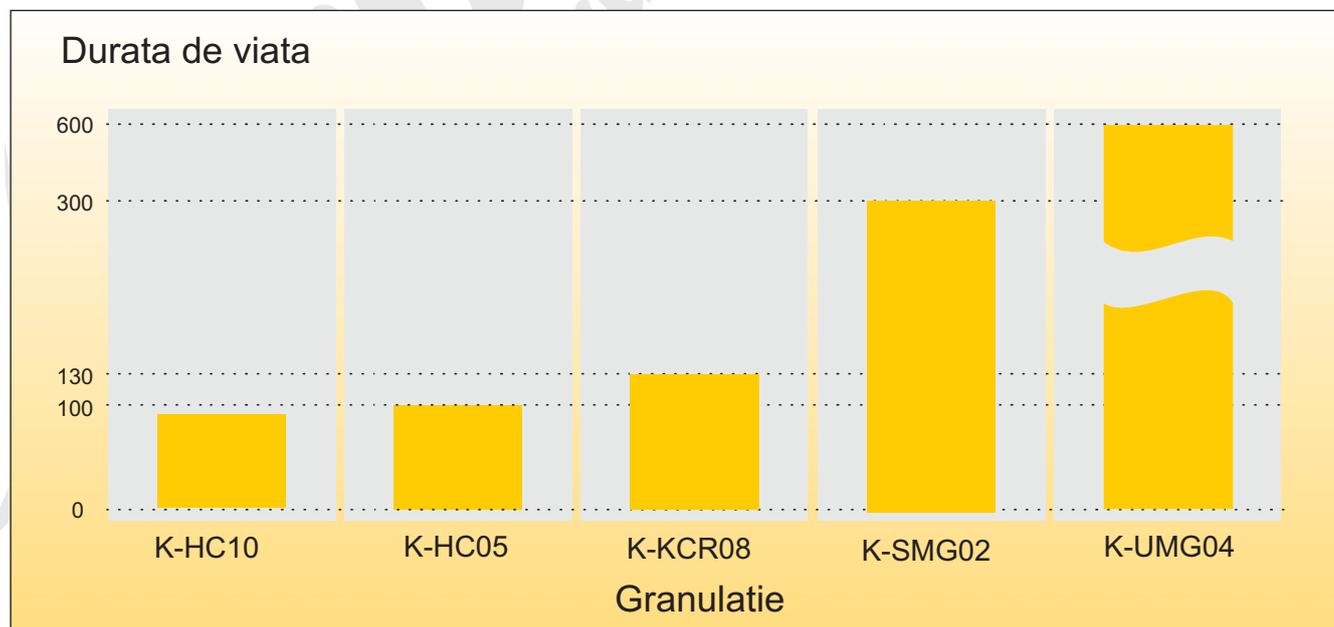

Este categoria cea mai noua de carbura metalica. Este o placuta Submicron cu mult crom in compozitie si are un adeziv de lipire special. Datorita acestor lucruri creste rezistenta la coroziune, oxidare . Muchia taietoare este mai bine definita datorita granulatului fine(0.5-0.8 micron). Duritatea placutei este mai mare ca la K-HC05, dar fara a scadea rezistenta la rupere. Placuta K-KCR08 rezista mai mult cu 30 % fata de K-HC05 si o inlocuieste cu succes pe aceasta.

K-SMG02

Aceasta structura are granulatia ultrafina (0.2-0.5 micron). Datorita acestui fapt carbura metalica este mai dura, dar casanta, crescand viata sculei cu 200%, in comparatie cu K-HC05. Este folosit la prelucrarea MDF si HDF, rezistenta la rupere scade fata de K-KCR08.

UMG04

La aceasta carbura, extrem de dura, se potriveste zicala " diamantele sunt pentru totdeauna". Testele au aratat ca a crescut durata de viata a sculei de 6 ori in comparatie cu K-HC05. Pentru a prelucra materiale foarte dure, aceasta categorie este o alternativa economica la sculele diamantate, pierderea financiara fiind mai mica in cazul in care se sparge o placuta. Rezistenta la rupere este cea mai mica, lucru care impune o atentie mare, atunci cand este folosita.

Bun

Excelent

Ascutirea placutelor amovibile va produce un praf care poate contine ingrediente periculoase.

Expunerea la praful provenit de la ascutirea produselor din acest catalog poate cauza: iritatii la nivelul nasului, gatului, pielii si ochilor sau ingreunarea respiratiei pe termen limitat sau permanent. Respiratia ingreunata devenita permanenta poate conduce la invaliditate sau deces.

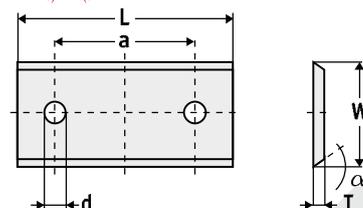

Vaporii proveniti de la ascutire in mediu ud pot contine acest praf. Evitati inhalarea vaporilor sau a prafului si contactul prelungit al pielii cu acestea.

Folositi o ventilatie adecvata si echipamente de protectie atunci cand ascutiti scule cu placute din carbura solida. Spalati mainile temeinic dupa manipulare.

Aruncarea deseurilor trebuie facuta in conformitate cu legea nr 211/2011 republicata in 2014
